TITLE : CONCRETE AND COATING MATERIAL

ABSTRACT : PURPOSE: To provide concrete for which an admixture capable of adjusting the fluidity and viscosity is mixed or a coating material.

CONSTITUTION: Fiber for which biological cellulose is disaggregated by a disaggregater is mixed in the concrete or coating material as the admixture. In the concrete or coating material for which the biological cellulose is mixed, the dispersibility of cement particles or pigment particles is improved and the fluidity is enhanced. Also by mixing the high concentration of the biological cellulose into concrete, viscosity of the concrete before harding is increased and also the separation of materials for concrete is prevented.
